JOB MARKET PAPER

“Who Gains from Credit Expansion? The Role of Heterogeneous Preferences for Leisure in Entrepreneurship”

This paper combines survey data with a quantitative model featuring heterogeneity in leisure preferences to explain the wide dispersion in entrepreneurial hours, firm size, and asset accumulation. The analysis shows that behavioral heterogeneity, rather than financial frictions alone, drives these outcomes. When collateral constraints are relaxed, welfare gains are concentrated among moderately working, credit-constrained entrepreneurs, while ignoring preference heterogeneity overstates overall welfare improvements.
